

STAMP_lathund_version_26jan2009

1. General guidelines

Scandiatransplant Acceptable Mismatch Programme (STAMP)

Proposals from the Working Group:

Purpose: To increase the likelihood of offering a suitable kidney graft to highly immunised recipients, thus reducing their time on the waiting list.

Success criteria:

Reduced waiting time for highly immunised patients.

Acceptable frequency of when a shipped kidney not is transplanted to the indicated STAMP patient (< 10 %?).

Survival of grafts comparable to graft survival in PRA-negative patients.

Acceptance criteria (1 and 2)

1. “Highly Immunised” status; at least one year on the waiting list with proven reactivity against more than 80% of B/T panel cells (CDC) or panel HLA class I and II antigens (solid phase assays).
2. “Highly Immunised” status in at least two consecutive samples over a period of more than 3 months; the most recent sample drawn less than 3 months before acceptance.

Recipient HLA typing:

Recipient HLA-antigens must be assigned at split level, by serology or molecular typing.

Recipient acceptable HLA-antigens:

Definition of acceptable HLA-mismatches is performed by laboratory at recipient centre.

Acceptable mismatches may be HLA-A, -B, -DR antigens.

Acceptable mismatches may include repeated mismatches from previous transplantations.

Definition of acceptable mismatches may be based on CDC and/or solid phase assays.

Wait listing and matching:

Recipients accepted for inclusion are specially marked in the waiting list base.

Recipients own antigens and the defined acceptable mismatches are treated like.

Recipients in the programme must be regularly screened at least every 3 months; PRA reactivity must be re-evaluated at least once a year.

Once accepted, patients will stay included even if PRA drops below 80%.

For each donor search, a special search among AM-recipients based on split level HLA typing is performed.

Exchange obligation is marked when the donor only has HLA-A,-B,-DR antigen specified in the recipient as own or acceptable.

Exchange priority will follow Scandiatransplant rules and placed as priority number 5: *Patient with STAMP-status when all donor HLA-A, -B, -DR antigens are either shared with the recipient or are among those defined as acceptable.* Return obligation as for other exchange rules.

Exchanged organ may be used for other local recipient if the indicated STAMP patient for any reason not can be transplanted.

A STAMP patient not transplanted with a shipped kidney because of a positive cross-match should be withdrawn from STAMP, re-evaluated and eventually re-admitted.

Only the centres joining STAMP have an obligation to exchange kidneys to a STAMP recipient.

Event reporting:

Donor centres must notify Scandiatransplant when exchanging a kidney to a STAMP recipient. Recipient centres must notify Scandiatransplant if the kidney is transplanted to somebody else than the indicated STAMP patient.

Recipient centre must give detailed follow-up information on performed transplantations.

ORGANIZATION**Steering committee:**

A steering committee (SC) for the project must be appointed by the board of Scandiatransplant. SC shall be composed by one tissue-typer from each of the countries Denmark, Finland, Norway and Sweden together with two representatives from the Nordic Kidney Group.

Proposals of STAMP candidates from individual centres must be evaluated and accepted by SC.

SC must keep updated on all effects of the programme, including:

- Number of exchanged organs.
- Changes in waiting time for STAMP recipients and for other waiting patients.
- Changed reactivity in individual waiting recipients
- Positive crossmatches at donor centre.
- Fate of performed transplants.

SC may decide to withdraw STAMP-status if antibody reactivity changes.

SC must give yearly status reports to Scandiatransplant.

2. Finding the menu for entering STAMP-data

```
MAIN MENU

1. Organ Transplantation
2. Nordic Living Kidney Donor Follow-up
3. Nordic Liver Transplantation Registry
4. Nordic Thorax Transplantation Registry

<Rep>

3. STAMP - Acceptable Mismatches Programm

Any patient with a treatment record – meaning that they are actively on a waiting list with an urgency :

T = Transplantable

NT = Temporarily not transplantable

WU = Temporarily withdrawn until specified date

Can be looked up in “STAMP pre transplantation”

If you are unable to query the patients, it means;

That the individual has not been Notified to the waiting list yet – OR-

That person has newer been entered into the system – OR –

That you use a wrong Scandia-/Person-number

STAMP - ACCEPTABLE MISMATCHES PROGRAMME		9201

3.1 STAMP pre transplantation

3.1.1 Checking for Acceptance criteria

Acceptance criteria (1 and 2)

1. “Highly Immunised” status; at least one year on the waiting list with proven reactivity against more than 80% of B/T panel cells (CDC) or panel HLA class I and II antigens (solid phase assays).
2. “Highly Immunised” status in at least two consecutive samples over a period of more than 3 months; the most recent sample drawn less than 3 months before acceptance.

Here is a patient that fulfill the criteria:

STAMP - ACCEPTABLE MISMATCHES PROGRAMME		9201
Scandia Number	<u>126645</u>	Pers Num <u>210563 1111</u> Sex <u>M Male</u> ABO <u>AB</u>
Surname	<u>test person</u>	First name <u>test person</u>

Event log
Date/User of First Reg/Last Change 26-JAN-2009 SCTP
    
```

```

FRM-40400: Transaction complete -- 1 records posted and committed.
Count: *0                                     <Replace>
    
```

Now you can go to "Methods of determ" and get a POP-UP window using <F7>
 Here you can as usually select one to many values via the list selected by pressing <F5>.

```

STAMP - ACCEPTABLE MISMATCHES PROGRAMME                      9201
Scandia Number  126645    Pers Num 210563 1111    Sex M Male    ABO AB
Find: _____
SUBSET Examination of lymphocyte subset reactivity
CLASS Immunoglobulin class examination
AUTO Autoantibody examination
BLOCK Antibody blocking evaluation
THROMB Thrombocyte absorption examination
OTHER Other routines
FLOW FLOW-PRA
CDC Complement Dependent lymphocyte Cytotoxicity test
Event log
Date/User of First Reg/Last Change 26-JAN-2009 SCTP
    
```

```

Press F10 to pick selection, F4 to cancel.
Count: *0                                     <List><Replace>
    
```

Save your input by pressing <F10> and go back by pressing <F4> to select "Acc mismatches"
 - again you use <F7> to come into the POP-UP.
 Please note that the patients own Tissue types can't be selected.

3.3 Patients ready to go on STAMP

When you believe that sufficient data has been entered, and you want to get the patient activated on the STAMP program, you have to change "Status" from I = Inactive to A = Active

STAMP - ACCEPTABLE MISMATCHES PROGRAMME		9201
Scandia Number	<u>126645</u>	Pers Num <u>210563 1111</u> Sex <u>M Male</u> ABO <u>AB</u>
Surname	_____	First name <u>test person</u>
Tx Cent	<u>AMP Status</u>	Country <u>DK Denmark</u>
Curr wa	_____	Wl status <u>N</u> Wait for tx number <u>1</u>
Date of	Find: _____	Dial/Tr cn <u>AC Aarhus</u>
Narr eq	_____	_____
Repea m	A Active	_____
Most re	I Inactive	<u>5 AUTO</u> II% <u>89 BLOCK</u>
Identif	_____	<u>0 CDC</u> II% _____
Date of	_____	<u>X:DR10</u>

Email sent to STAMP committee Please acknowledge message. (Ok)

An Email has now been send to the committee and they will then go trough the patient to see if the person is valid for the program.

Subject: STAMP:NI->NA
 From: reccmo@scandiatriplant.org
 Date: 13:13
 To: reccmo@daimi.au.dk, frank.pedersen@scandiatriplant.org, reccmo@scandiatriplant.org

Scand 126645 updated 26-JAN-2009 by SCTP: Not signed up, changed status to Active

NOTE: When at least two of the Committee members has accepted the candidate, the "Sign up" will be altered from N = NO to Y = Yes
