

STAMP - Quality Control (QC)

Did you forget?

November 12, 2013 a new quality control in STAMP was introduced. This new quality check retrieves all serological HLA types not found among the recipients own HLA, acceptable mismatches or identified antibodies. This new STAMP check is an additional quality control and is meant as a help and it does not inflict with the activation of patients to STAMP.

The new QC is accessible from two places in the STAMP screen from 'STAMP check' and 'Acc. Mismatches'.

Entry from 'STAMP check'

The screenshot shows the STAMP software interface. At the top, there is a menu bar with 'File', 'Edit', 'View', 'Window', and 'Help'. Below the menu bar is a toolbar with various icons. The main window displays the following information:

```
STAMP - ACCEPTABLE MISMATCHES PROGRAMME 9201
Scandia Number          Pers Num          Sex M Male          ABO AB
Surname                  cmo 29-NOV-2011 test  First name      cmo 29-NOV-2011 test S
Tx Center                CP København          Country        DK Denmark

* POP UP *

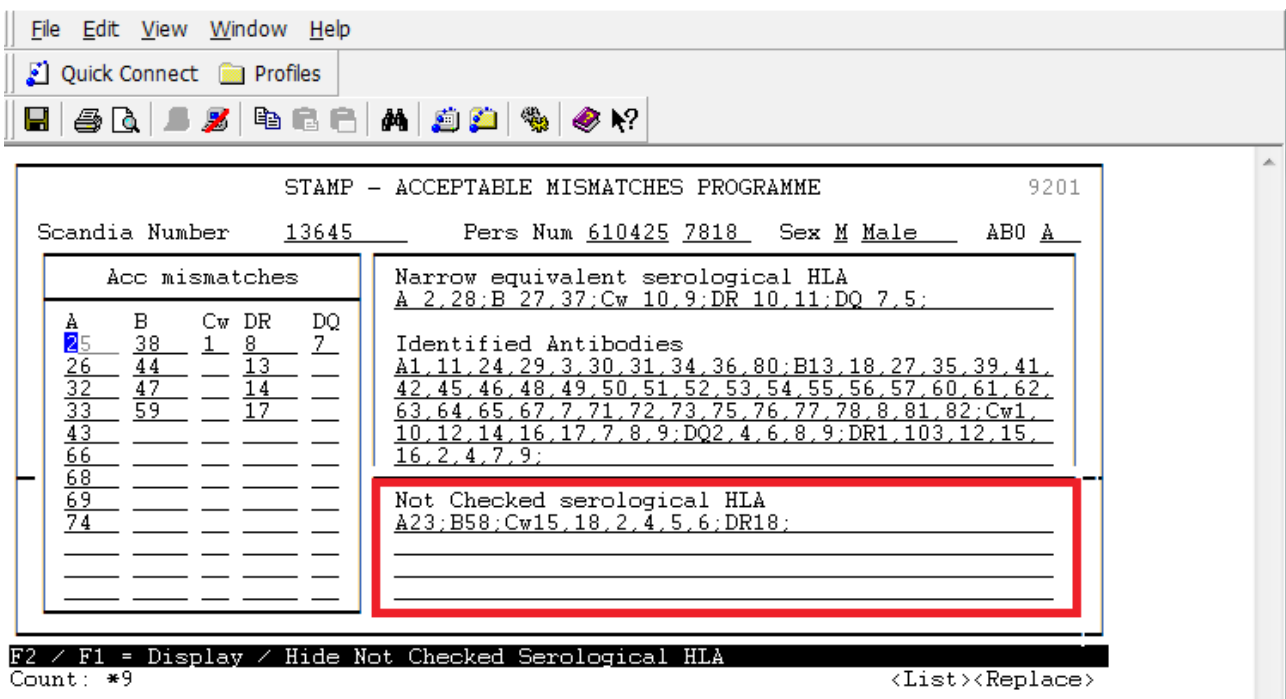

Count: *1 <Replace>

Enter the 'Acc. Mismatches' pop-up by pressing >F7<

By pressing >F2< all antigens not given as own HLA antigens, acceptable mismatches or identified antibodies will be display in the right bottom corner.

The box 'Not Checked serological HLA' does not need to be empty to get the recipients accepted to STAMP, it is merely a help to see if you have evaluated all HLA antigens.

Pressing >F1< will hide the 'Not checked serological HLA' box again.
