Updates in existing YASWA modules

Additional recipient information in organ procurement

In ‘Deceased Donor’ -> ‘Organ procurement’ additional display of recipient information has been added. The additional recipient information displayed is age at transplantation and survival status. The information has been added as a consequence of restricted access to data on recipients from other countries.

Change of access to view potential donors

Definition of potential deceased donor (Donation realized: P - Potential): A person whose clinical condition is suspected to fulfill brain death criteria, but is not (yet) accepted as a donor.

Access to view potential donors from other countries has been restricted, thus you are now only able to look up potential donors from your own country.

Unless an organ offer has been sent out, then all countries can see the information on the specific potential donor.

Current status on access to recipient and donor information

Recipient information

You are able to access data on all recipients in Scandiatransplant, whom are active and temporarily on hold on the waiting list.

When it comes to patients not currently on the waiting list, you can only see patients with your user nationality and patients linked to a transplant center in your own country.
Deceased donor information

On eligible, actual and deceased donors you can access all information within 6 months after date of donation no matter country. Hereafter you only have access to donors from your own country and donors from whom your center has received organs.

Access to view potential donors is limited to potential donors from your own country. Unless an organ offer has been sent out, then all countries can see the information on the specific potential donor.

New ‘STAMP’ status for transplantability calculation

Some centres have wished to have a possibility to make a transplantability calculation on patients that might never be relevant for LAMP or STAMP. For these cases a new ‘calculation’ value has been added to the status field.

Transplantability calculation on kidney patients

Change of password

If you wish to change your password to YASWA you can do so by entering the ‘change password’ menu.

Your new password is evaluated and must be considered strong to be accepted.
The Articles of the Association Scandiatransplant

The working group on articles (WGA), which was formed in 2014, has now finalized the work with a major revision of the Scandiatransplant articles. The suggestion will be presented at the Scandiatransplant Council of representatives meeting May 11, 2016.

The suggestion is now available on the Scandiatransplant homepage for all to read:
