• New facility to handle evaluation and approval of STAMP candidates
• HLA DRB3/4/5, DQA1 and DPA1 matching in STAMP and LAMP
• Change in blood gas and vent. registration on deceased donors
• ‘ACT’ new lab. test on deceased donors
• Deceased donor, registration of permission for research
• Indication for STEP and repeated info about next match run
• Validation error on deceased donor parameters
• Application deadline Scandiatransplant travel and research grants 2020

Database update
Jan. 22nd 2020

Purpose

By this information letter, we wish to communicate to you about status and progress related to the database, collaboration with groups related to Scandiatransplant and on-going working projects.

We hope that you will read it and share the information with whom it might concern.

Do not hesitate to contact us for further information, ideas, problems and help.

Scandiatransplant

On STAMP and LAMP at the same time
Several centers using the LAMP program have wished for the possibility to have patients listed on LAMP and STAMP at the same time with different criteria.
To allow this two separate tabs are now available – one for registration of LAMP information and another for STAMP information.

You have the possibility to copy existing LAMP or STAMP information to the other tab, if the tab does not already hold any information.

The kidney recipient search algorithm uses the information registered in the STAMP tab for exchange obligation no. 1.
If the recipient does not fall out as a match for priority 1-5, information from the LAMP tab is used for match.

New facility to handle evaluation and approval of STAMP candidates
The evaluation of STAMP candidates mainly take place by e-mail correspondence, which results in a lot of work with keeping track of the status and information.
The information is only available for the STAMP committee, not to the centers sending patients for evaluation and furthermore documentation of the process is only kept in e-mails.
To improve this process a new data entry grid has been added in the ‘STAMP log’ tab (Recipient -> All recipients -> enter the active waiting list record on the specific patient).

The STAMP committee and the persons putting patients forward for STAMP evaluation must use this new facility to approve and comment on STAMP candidates.

To add information to the table, click below the ‘Comments’ column header. This will make a new window appear, which is where information can be entered/viewed.

Each time information is added in the new table an e-mail with updated information will be sent to the STAMP committee and persons working on the patient record.

New QC (Quality Control -> STAMP) ‘Candidates for evaluation’ brings forward a list of patients waiting for STAMP evaluation.

**HLA DRB3/4/5, DQA1 and DPA1 matching in STAMP and LAMP**

In the autumn of 2019, it was proposed by the tissue typers group and approved by the Nordic Kidney Group to include matching on low resolution HLA DRB3/4/5, DQA1 and DPA1 in the STAMP and LAMP programs.
With the update today the possibility to register acceptable mismatches for these alleles have been introduced:

Acceptable mismatches for these new alleles must be given for all STAMP and LAMP patients.

All tissue typing labs. should now start to update the patients already included on STAMP and LAMP, all patients must be updated.

DRB3/4/5, DQA1 and DPA1 will not be included in the search algorithm before the updates have been finalized, even though you are able to add/see the HLA types in the search screen:

The Scandiatransplant office will get in touch with the tissue typing labs to set the date for launching the updated search algorithm.

**Change in blood gas and vent. registration on deceased donors**

Data entry has been changed in the ‘Blood gas & vent.’ tab, so that it is possible to register several results (date + time) and follow the development during hospitalization. When you wish to add a new result, click on ‘Add new’
‘ACT’ new lab. test on deceased donors

‘ACT (activated clotting time)’ has been added as a new lab test on deceased donors.

Deceased donor, registration of permission for research

A wish has been put forward to have a possibility of general registration whether permission for research has been given or not. The possibility to register this has now been added in the organ procurement tab.

Indication for STEP and repeated info about next match run

When entering data on patient relevant for STEP it is now possible to give one or more indications of why the patient is joining the program.
As previously announced the next STEP match run will take place January 28th 2020.

Deadlines for the upcoming STEP match run:

- Deadline for data entry in YASWA (new pairs and updates): January 23rd 2020, 10:00 CET
- Scandiatransplant office will do a quality check on data and send list with pairs to be confirmed by each center: January 23rd 2020,
- Confirmation of pairs must be done to Scandiatransplant office no later than January 27th 2020, 12:00 CET
- STEP match run: January 28th 2020

**Validation warning on deceased donor parameters**

Some of the organ groups are very interested in getting data to calculate donor risk index scores. On a realized deceased donor missing weight, height, hypertension and diabetes will now lead to a validation error warning.

As this is only a warning you are able to save data, even though the information is missing. This is not the case on the obligatory parameters.

**Application deadline travel and research grants 2020**

1st Feb. is the final date for sending an application for a Scandiatransplant travel or research grant 2020.
