Updates in existing YASWA modules

‘Living kidney donor Basic’ weight, BMI and AB0 moved + additional parameter in query

Body weight and BMI calculation has been moved from ‘Baseline risk factors’ to ‘Peroperative data’ tab, so they are now found together with information on height.

To make room for this change AB0 blood group has been moved to the initial ‘Basic information’ tab.

Furthermore 'Date of donation' has been added as a search parameter, which makes it possible to bring forward donors for a specified period.

‘Thorax registry follow up’ CO diff. and O2 has been shifted around

In thorax registry follow up -> Graft function -> ‘Graft function lung’ ‘CO diffusion’ and ‘O2 at rest’ has been shifted around.
Possibility to specify required organs for waiting list ‘Other’

For patients listed on waiting list ‘Other’ you are now able to specify which other organs the patient is currently waiting for.

Update - Information on urgent heart, lung and liver patients by SMS and email

Death registrations/updates in other parts of the system has caused some trouble, so information on withdrawal on not currently active patients (previously urgent) have been sent out. We apologies for this.

We have been working thoroughly with solving these rather complex problems and hope to have done so in the resent update.

Thank you for the feedback which we have received.

Keep in mind that we are still developing the solution, so please be patient and keep your current fax solutions running parallel until further notice.
