## Thorax registry, separate pre tx data entry for heart and lung patients

The Scandiatransplant Heart and Lung Group (SHLG) has decided that the thorax registry needs a major revision. One of the key points is that data entry on heart and lung will be separated in two.

Today the first part of this revision is introduced in thorax pre tx, where heart and lung have separate menu entries.

The screenshot shows a web application interface for the Scandiatransplant registry. At the top, there are tabs for 'Recipient', 'Liver Registry', 'Thorax Registry', and 'Kidney Registry'. The 'Thorax Registry' tab is active, and a dropdown menu is open, showing two options: 'Thorax pre transplant -- Lung' and 'Thorax pre transplant -- Heart', both of which are highlighted with a red box. Below the menu, there are search and navigation buttons: 'Search', 'Add new', 'Statistics', and 'Reset'. The main content area contains a search form with the text '[Enter search parameters]' and several input fields: 'Scandianumber:', 'Surname:', 'Country:', 'ABO blood group:', 'First name:', 'Sex:', and 'Tx-center:'. At the bottom, there is a table with columns: 'Scandianumber', 'Person number', 'Surname', 'First name', 'Tx-center', 'Pre tx-date', 'ABO blood group', and 'On wait.list'. The table is currently empty, displaying 'No data to display'.

Furthermore, the heart pre tx form has been updated according to what has been decided by SHLG. It strives to be in line with the registration form – found [here](#).

Revision of the lung pre tx form is still up for discussion.
