

## **Guidelines on reimbursement for transportation within the Scandiatransplant Organ Exchange Programme**

When **kidneys** are sent (import/export) according to the Scandiatransplant guidelines/rules, the cost of transports is held by the exporting Transplant centre. This cost will be “balanced” within the pay back system of kidneys.

### **Liver and/or thoracic organs:**

When **liver and/or thoracic** organs are exported within the Scandiatransplant exchange programs the exporting centre has the right to claim the cost for the transportation. Some of the transplant centers within Scandiatransplant always exports livers or/and thoracic organs and therefore these costs will never be balanced. .

The cost of transportation of *retrieval teams* involved in the procedure is also included in this routine.

Approved by the Scandiatransplant board February 2016
