**Size measurement in liver allocation**

(October 2021)

**For adults:** The Right liver lobe is the anatomical determining factor.
- Anterio-posterior diameter and transverse diameter of the right lobe

**TR diameter:** transverse distance from the lateral aspect of the abdominal cavity to the mid-portion of the vena cava (measured at the level of upper pole of the right kidney)

**AP diameter:** distance from posterior aspect of the abdominal cavity to costal anterior margin measured at the level of upper pole of the right kidney
For paediatric transplantation (S2+3)
- Thickness and length of S2+3

**Length**: transverse distance from the umbilical fissure to the tip of S2/3

**Thickness**: The largest anterio-posterior measurement of S2/3
