The list is default sorted so that recipients who have cancer and thereby highest priority according to the exchange rules, will be listed in top. Followed by sorting on waiting time.

### 3. Diagnosis

Alle recipients -> specific recipient -> waiting list information

Diagnosis must be registered on the current waiting list entry. If no diagnosis is set, it will be interpreted as Cancer diagnosed = No.

The screenshot displays a web-based form for 'Waiting list information'. At the top, there are navigation menus for 'ordings', 'Misc', 'Reports', 'Donor', 'Recipient', 'Liver Registry Forms', and 'Thorax Registry Forms'. The 'Recipient' menu is open, showing options: 'Deceased donor transplantation', 'Paediatric Liver waiting list', 'Urgent waitinglist', 'All Recipients', and 'Search for suitable kidney recipient'. The 'All Recipients' option is selected. The form is divided into sections: 'Generic data' and 'Specific data'. The 'Generic data' section includes fields for Scandia Number, Waiting list type (set to 'LI: Liver'), Urgency (set to 'T: Transplantable'), Date of first urgency (13-Nov-2015), Transplant center, Immunization (set to 'NI: Non immunized'), Surname, Date of entry (13-Nov-2015), Date of last urgency (13-Nov-2015), Treatment/dialysis center, and Date of last change of Immunization (06-Nov-2015). The 'Specific data' section has tabs for 'Specific data', 'Infection serology', 'Urgency History', and 'Termination'. The 'Primary diagnosis' dropdown menu is highlighted with a red box and contains the text 'E6: Cancers, Hepatoblastoma'. Below it is an 'Old diagnosis' field. The 'Liver Waitinglist' section includes 'Waiting For Liver Number' (set to 1) and 'Special requirements'.

### 4. Waiting for combined Liver-kidney transplantation

All recipients -> specific recipient -> waiting list information

When a paediatric recipient is waiting for a combined liver-kidney transplantation, it is very important that you state on the waiting list if the recipient can use a liver without a kidney or not.

Liver required only with kidney: No -> The paediatric recipient will appear on the list.

Liver required only with kidney: Yes -> The paediatric recipient will not appear on the list.

## 5. Waiting for multivisceral transplantation

When a paediatric recipient is waiting for a multivisceral transplantation you must state on the waiting list, which organs the recipient is waiting for and if the recipient should appear on the paediatric liver and multivisceral waiting list.

## 6. Print/save

If you wish to print/save the list, click on the 'Print' button and a pdf will be generated, which can be printed or saved.
