## Improved mobile device application

Updates have been made to the YASWA application on mobile devices to make it more user-friendly.

---

### User-friendly access on mobile devices

---

On mobile devices, the 'Priority lists' (urgent, kind request, pediatric liver and multivisceral waiting lists) have been made easily accessible in their PDF format. Furthermore, your local 'Waiting lists' (kidney and liver waiting lists in this first version) are now available in a new, overview format.

The standard version of YASWA can still be reached by pressing the icon named "YASWA".

To bring forward the lists on your mobile device, you might need to approve pop-ups within your browser or device settings.

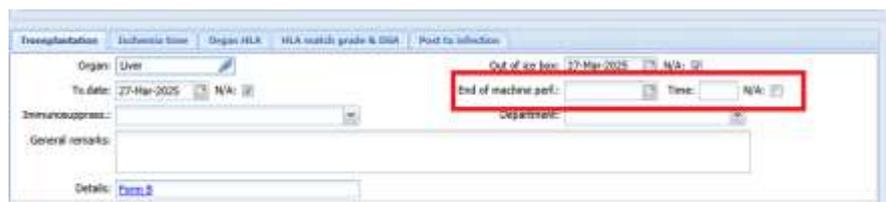

## "End of machine perfusion" now available

Within the transplantation tab, a field for "End of machine perf." has been added and placed directly below "Out of icebox".

---

### New field

---

## Updates within 'All Recipients'

### New "Procedure status" for recipients

A new status bar has been added for all recipients. The status is based on registrations within the treatment record.

#### New status bar

To help with this, a new field called "Accepted for" has been added with the options: "Deceased donor", "Living donor" and "Living and deceased donor".

The screenshot shows a web form titled 'Waiting list information'. At the top, there are tabs for 'Info', 'Procedure status', and 'Accepted for living and deceased donor to'. The 'Accepted for living and deceased donor to' tab is active, and a red arrow points to this field. Below the tabs, there are various input fields including 'Scan/number: 215999', 'Waiting list type: KI Kidney', 'Urgency: T: Transplantable', 'Future Withdrawn from:', 'Surname: last', 'Date of entry:', and 'Future Withdrawn to:'.

The procedure status is updated when the following information is provided:

Procedure status	Required data entry
Referred	Waiting list information has been entered, but NO urgency is set.
Accepted	When urgency is set.
Accepted for deceased donor tx	When "Deceased donor" is entered in the field "Accepted for".
Accepted for living donor tx	When "Living donor" is entered in the field "Accepted for".
Accepted for living & deceased donor tx	When "Living and deceased donor" is entered in the field "Accepted for".
No referral	When there is no open waiting list.

### New fields for pre-transplant medical status

On all treatment records, new fields for "Hypertension" and "Treated diabetes" have been added.

#### New fields for pre-transplant status

When data is entered in "Treated diabetes", the information is transferred to Form A within the Liver Registry for liver recipients and to Thorax Pre-Tx, heart within the Thorax Registry for heart recipients.

The screenshot shows a web form titled 'Specific data'. It contains various fields for medical information, including 'Primary diagnosis', 'ERA-EDTA renal diagnosis', 'Backup option', 'Accepted for: A: Living and deceased donor', 'Accepted date', 'Before', 'After', 'ABO blood group tite', 'Max anti-A tite', 'Max anti-B tite', and 'Date of analysis'. At the bottom, there is a section for 'Pre-transplant status' with two fields: 'Hypertension' and 'Treated diabetes', which are highlighted with a red box.

## New fields for liver recipients

### Additional fields on the liver waiting list

For all liver waiting lists records, new fields for PEth (alcohol biomarker) and a table to record development in laboratory values have been added.

The screenshot shows a web form for 'Liver Waiting List'. The form includes various input fields for recipient information, such as 'Waiting For Liver Number', 'Recipient anterior-posterior diameter', and 'Max acceptable anterior-posterior diameter'. A red box highlights the 'PEth' field and a table below it. The table has columns for 'Date of lab test', 'Alcohol', 'PEth', 'Albumin', 'Creatinine', 'Hb (g/dL)', 'CTP', 'MELD score', and 'MELD-XI score'. Below the table is a 'Details' link.

## New fields

### New fields for MFI cut-off in Antibody Screen Test

Within the tab Antibody Screen Test on all recipients, two new fields have been added: "Local cut-off" and "STAMP cut-off" for each single test /sample date.

The screenshot shows the 'Antibody Screen Test' form. It includes fields for 'Scan/ID number', 'Date of serum sample', 'Class I', 'Class II', 'Determination Method I', and 'Determination Method II'. A red box highlights the 'Local cut-off' and 'STAMP cut-off' fields. Below these are sections for 'Sero logical HLA antibodies' and 'Transverse HLA antibodies'.

### Update of Donor pool

A new donor pool, based on 5000 recently HLA typed deceased donors registered in ScandiTransplant, has been created. The pool forms the basis of calculating the Transplantability Score (TS) and combined PRA (cPRA). The new pool replaces the old pool of 2000 donors.

### STEP match run

The next STEP match run will take place April 23rd 2025. Deadline for data entry in YASWA (new pairs and updates) is April 16th 2025 10:00 CET. Pairs and altruistic donors must be tagged with '21: 21st run April 2025' to be included in the match run.
