

Rules for exchange of kidneys from deceased donor within the Scandiatransplant cooperation

Exchange obligations

By existing HLA compatibility at least one kidney per deceased kidney donor must be applied for transplantation of a recipient on the Scandiatransplant waiting list according to the below-mentioned rules in order of priority: (However, this applies only if both kidneys from a deceased donor are applicable for transplantations)

1. Patient with STAMP-status that are ABO compatible with donor and where all donor HLA-A, -B, -C -DRB1, -DRB3/4/5, -DQA1, -DQB1, -DPA1, -DPB1 antigens are either shared with the recipient or are among those defined as acceptable.
2. Highly immunized (PRA \geq 80%) patients who are HLA-A, -B, -DRB1 compatible with donor.
3. Immunized patients (PRA \geq 10% but below 80%) who are HLA-A, -B, -DRB1 compatible with donor.
4. If organ donor is <50 years of age, at least one kidney is offered to recipient <16 years of age (counted from time of registration), if there is HLA-DRB1 compatibility and in addition not more than 2 HLA-A, B mismatches.
5. Patients who are HLA-A, -B, -DRB1 compatible with donor unless the proposed recipient is > 30 years older than the donor.

HLA compatibility:

HLA compatibility means 0 (zero) HLA mismatches between donor and recipient as regards to broad HLA-A, -B, DRB1 and furthermore HLA-Bw4/Bw6.

ABO blood group matching:

Exchange obligation priority 1: Donors are matched ABO-compatible

Exchange obligation priority 2-5: Donors are matched ABO-identical, with the exception of donors of blood group A, which also can be exchanged to recipients of blood group AB.

Return obligations

- Kidneys, which are exchanged on basis of the above-mentioned obligatory exchange rules, must be "paid back".
- Payback should be offered with the **first** available ABO blood group identical kidney with a quality comparable to the primarily received kidney.
- Kidneys from a donor aged ± 15 years, compared to the age of the primary donor, are eligible for payback. The cause of not offering such kidneys must be noted.
- Kidneys outside this age range and in other blood groups may also be offered.
- The kidney offered as payback must be of a quality acceptable to the recipient center. The receiving center is allowed to reject any payback offer. The cause of this rejection must be noted in all cases.
- In rare cases two kidneys will have to be paid back from the same donor. Thus, it will not be possible to always keep one kidney in the retrieving center. However, the primary exchange obligations above, based on HLA-matching, are always in priority before the payback/return obligations. This priority rule applies also when you optionally chose to send both kidneys in the primary exchange.
- If there is a suitable recipient for a kidney transplantation combined with any other organ, i.e. pancreas liver, heart, intestine, this may also be prioritized and regarded as an acceptable reason for not paying back a kidney.
- If there are other extraordinary reasons for not following the payback obligations, this must be agreed after personal contact with the responsible physician at the receiving center.

The above rules are active from April 15th, 2020
